

M & S AUTOMATED FEEDING SYSTEMS, INC.

SALES AND SERVICE ▯ VIBRATORY AND CENTRIFUGAL FEEDER BOWLS AND EQUIPMENT

We at **M & S Automated Feeding Systems, Inc.** design, fabricate and service automated food feeding systems for an assortment of products. We have turned the designs into standard machines and we are now marketing them to food processors such as you. M & S Automated Feeding Systems feeders are USDA approved and are designed for easy removal and replacement of the tooling for sanitation and wash down. They work equally as well in freezer conditions and have a self-cleaning design to rid themselves of crumbs and other small media during regular running.

Our systems have fed, oriented and stacked frozen waffles, frozen hash browns, different styles and sizes of frozen hamburgers. Another has fed and inspected raw ears of corn without the husks at feed rates over 450 cobs per minute. The feeder systems are capable of feeding and orienting many different sizes of product in the same feeder. Changeover is tool less, normally taking less than five minutes for a complete change. Our improved tooling has proven to be reliable for heavier parts like frozen breadsticks that ran at 720 sticks per minute and 10.5" long!

The product is usually loaded in bulk into our hoppers or fed FROZEN BREADSTICKS directly from blast freezers where our equipment will feed, orient and accumulate the parts. Our systems are capable of feeding any of these types of products to packaging equipment, cartoners, case packers or manual operator stations.

We have many feeding systems all over the world working accurately, reliable and economically. Our systems come with a one-year warranty and M & S Automated Feeding Systems provides installation, training and service if requested. We have drawings on CAD for your floor or machine layout in .dwg, .dxf or .fcad. We can email these to you or provide them on disc for plant use. We also have test systems on our floor, you can test your product and send you a video to show your product running so you know what we have in mind.

We also have literature and videos available and would love to help you out with your feeding needs. Please visit our web site at www.msautomated.com where you can check out the variety of things we can do for you. If these or any of our other custom feeding systems interests you, please contact us!

Sincerely,

Mark Grinager
